

WELL Health Launches “[apps.health](#)”, a Digital Health App Marketplace for EMR users

- **apps.health** is a marketplace and innovation hub for digital health. Its mission is to connect healthcare professionals with new and pioneering solutions or “apps” which integrate securely and seamlessly with a clinic’s Electronic Medical Record (EMR) software.
- **apps.health** is a platform for digital health technology companies and/or third-party software developers to collaborate with WELL to promote and accelerate the adoption of their products and services and by doing so accelerate adoption of improved healthcare experiences for both physicians and their patients.
- **apps.health** currently features approximately 20 digital health applications provided by 12 app publishers and is expected to more than triple the number of solutions by mid-2021. Some of the applications already featured on the app marketplace are related to telehealth, online patient booking, referral handling and AI workflow automation to help enhance clinical efficiency.

Vancouver, BC, September 29, 2020 – WELL Health Technologies Corp (TSX: WELL) (the “**Company**” or “**WELL**”), a company focused on consolidating and modernizing clinical and digital assets within the primary healthcare sector, is pleased to announce the launch of **apps.health**, a digital health app marketplace and innovation hub that connects digital health technology companies and software developers to the WELL network of over 2,000 primary healthcare clinics and 10,000 physicians. WELL intends on collaborating with digital health application developers to market and promote the features and benefits of their products and services to clinics and physicians, and by doing so accelerate adoption and enable improved healthcare experiences for both physicians and patients.

“To our knowledge **apps.health** is the first comprehensive offering of a digital health marketplace for EMR integrated apps in Canada that allow digital health software and technology companies to showcase their capabilities and provide a call to action,” said Hamed Shahbazi, Chairman and CEO of WELL. “Our objective with **apps.health** is to provide an environment where clinicians and app publishers can meet and transparently discover opportunities to modernize and digitize practices across the country.”

Selecting the right technology solution for a healthcare clinic can be an overwhelming experience for healthcare providers. **apps.health** provides a single destination where practitioners and healthcare providers can discover digital tools and applications that

have been reviewed and curated by WELL to ensure meaningful clinical value and effectiveness. The applications and software solutions available on **apps.health** tightly integrate with WELL's OSCAR⁽¹⁾ Pro EMR. The solutions are highly integrative and have undergone rigorous testing by third party developers. Furthermore, all app publishers on the **apps.health** marketplace have been required to provide current information on their security and privacy posture.

The **apps.health** marketplace is a powerful channel for third party application developers who want to market their solutions to WELL's growing network of over 2,000 clinics and 10,000 physicians across Canada. The **apps.health** developer program provides assistance to third party developers to integrate to OSCAR Pro EMR, and other EMR solutions in the future. Healthcare clinics can have confidence working with third party application developers whose applications and software tools have been reviewed by WELL.

"We are really excited about the impact that **apps.health** can have on primary healthcare and patient health experiences," said Shervin Bakhtiari, General Manager of WELL Digital Health Apps business unit. "For healthcare providers, **apps.health** makes it easier than ever to connect your EMR, staff and physicians with applications designed to improve clinic efficiency, patient experience and ultimately health outcomes."

The **apps.health** marketplace already features 12 partners including Insig, Phelix.ai, Ocean by CognisantMD, Cliniconex, Auxita, Excelleris a division of LifeLabs, Veribook, Empower Health, CHIME Technology Inc., Health Data Coalition, and McMaster University Department of Family Medicine offering approximately 20 applications encompassing solution categories including, but not limited to telehealth, online booking, AI-driven workflow automation, patient messaging/reminders, requisition eOrders, patient triage and in-take forms, clinical dashboards, eReferrals, COVID-19 screening, and patient check-in and waiting room automation. WELL will be looking to quickly add more app publishers in the coming weeks and months with the goal to triple the number of apps provided on the marketplace by mid-2021.

1. OSCAR, an acronym for "Open Source Clinical Application Resource", is an open-source EMR or "Electronic Medical Records" system developed by McMaster University's Department of Family Medicine to inspire collaboration between the wide spectrum of health professionals with the goal to drive downstream benefits to patient care.

Forward-Looking Statements

This news release may contain "forward-looking statements" within the meaning of applicable Canadian securities laws, including, without limitation the statements that: apps.health may accelerate adoption of improved healthcare experiences; applications are expected to triple by mid-2021; and the initiative may positively benefit primary healthcare and patient experience. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by management, are inherently subject to significant business, economic and competitive uncertainties, and contingencies. These statements generally can be identified by the use of forward-looking words such as "may", "should", "will", "could", "intend", "estimate", "plan", "anticipate", "expect", "believe" or "continue", or the negative thereof or similar variations. Forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause future results, performance or achievements to be materially different from the estimated future results, performance or achievements expressed or implied by those forward-looking statements and the forward-looking statements are not guarantees of future performance. The Company's statements expressed or implied by these forward-looking statements are subject to a number of risks, uncertainties, and conditions, many of which are outside of the Company's control, and undue reliance should not be placed on such statements. Forward-looking statements are qualified in their entirety by the inherent risks and

uncertainties surrounding the Transaction, including: adverse market conditions; risks inherent in the primary healthcare sector in general; COVID-19 related risks; issues associated with application development, usage and integration; cyber-security and privacy related risks; risks that future results may vary from historical results; and that market competition may affect the business, results and financial condition of the Company. Except as required by securities law, the Company does not assume any obligation to update or revise any forward-looking statements, whether as a result of new information, events or otherwise.

The Toronto Stock Exchange has neither approved nor disapproved the information contained herein.
